

# Gemensamma Motioner i Sveriges Riksdag 2006/2007

Ledamöter vilka har lämnat in motioner tillsammans har förbundits med linjer. Linjernas måttnad anger antalet gemensamma motioner. Storleken på ledamöternas rutor anger deras betweenness-centrality, hur många vägar genom nätverket som passerar igenom dem. Automatisk gruppering av ledamöter i kluster har använts (Newman, M.E.J., Girvan, M., (2004). Finding and evaluating community structure in networks, Physical Review E, 69:026113).
